Management, Manufacturing Resource Planning, Human  
Resource Management System... )

Developed by:  
 **vision INC.**

## Mission

to empower people's use of IT worldwide,  
to construct on talent and clients alike,  
to support decisions with modular data,  
to tailor for major industries on innovative technology,  
to radiate success and business profitability,  
that's our vision!

## Vision characteristics

- An enterprise integrated turn key solution that is flexible and easy to operate, upgrade and customize
- Has a modular database, which supports a variety of organizational functions, activities and/or services including data mining and business intelligence
- Has a consistent look and feel throughout all of its modules which speeds the implementation and training process
- Is an information system that bridges the gap across the organization for better analysis, and planning capabilities through better document management, components, services and more
- Installs easily on existing hardware and Windows environment software

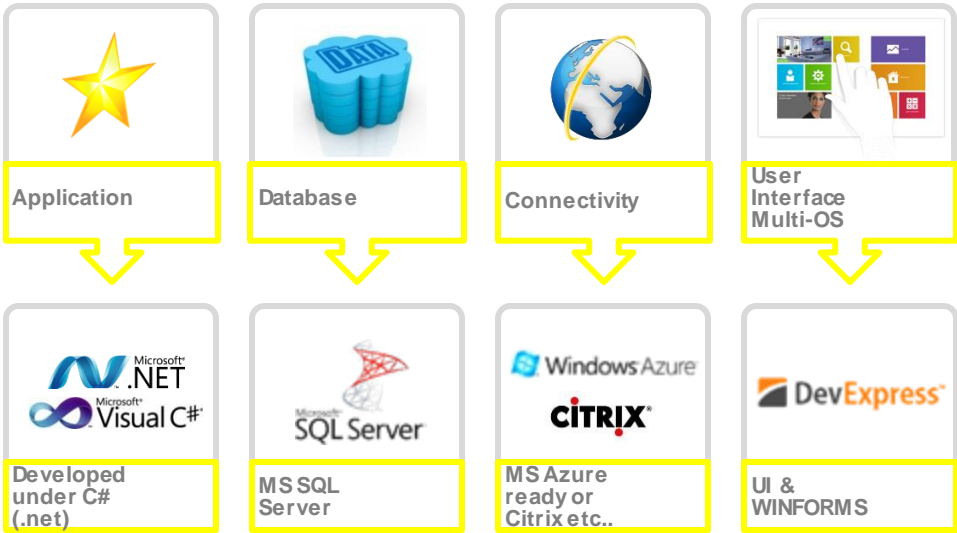

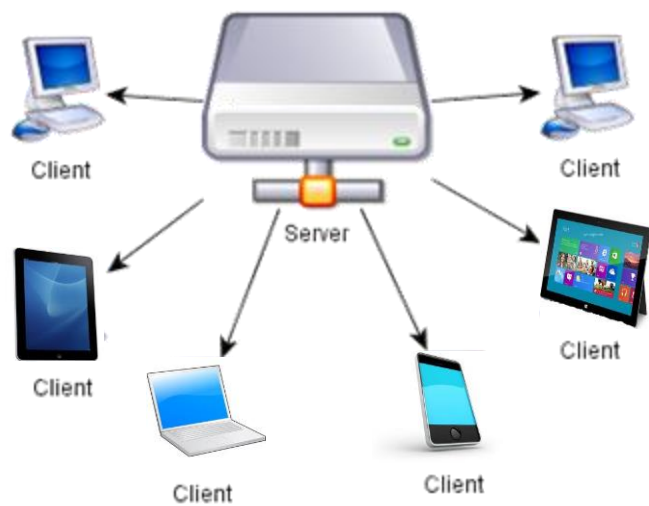

## Vision features

- Customizable Screen, List, Themes and much more
- Tailored Dashboards, components, pages and more
- Unmatched controls that are constantly upgraded
- Print to Excel any Form or Report
- Centralized Documents & Archiving
- Modifiable Web page windows
- Customizable Startup form
- Customizable Search Engine
- Custom Reports using ReportViewer
- SQL scripting
- Multi-Users, each with customizable profile & rights
- Multi-Companies with different Fiscal Years, branches and ledger
- Multi-Departments, Cost Centers and Verticals
- Multi-Currency with two Basic Currencies
- Multi-Locations each having multiple Outlets
- Integration with MS Office
- Simple and integrated Back up

## Libraries & Controls

 <b>Data Grid &amp; Editors</b> Outlook® Style data shaping built-in.	 <b>Reporting</b> Banded Report Designer and Viewer.	 <b>Charting</b> Comprehensive Collection of 2D and 3D Charts
 <b>Spreadsheet Control</b> Excel inspired spreadsheet control.	 <b>Snap Reports</b> Word Inspired Reporting platform.	 <b>Ribbon, Menu, Docking</b> Fully customizable Outlook® style Ribbon.
 <b>Pivot Grid</b> Excel® style multi-dimensional pivot table.	 <b>PDF Viewer</b> WinForms PDF Viewer Control.	 <b>Scheduler</b> Outlook® Style scheduling and calendars.
 <b>Tree List</b> Hybrid treeview and list view control.	 <b>Gauges</b> Analog and digital gauges with 150 built-in presets.	 <b>Rich Text Editor</b> Word® style WYSIWYG word processing.
 <b>Property Grid</b> Vertical data grid and VS style property editor.	 <b>Layout Manager</b> Create forms faster, with runtime customization.	 <b>Tile Control</b> The Windows 8 touch-first Tile UI.
 <b>Live Tile Manager</b> Windows 8 Live Tile Manager	 <b>Navigation Bar</b> Outlook® Style app navigation controls.	 <b>Editors &amp; Controls</b> Unmatched data editing options.
 <b>Map Control</b> Different map types and amazing interactivity.	 <b>Printing-Exporting</b> Instant reporting - render and export your UI.	 <b>Spell Checker</b> Office® style spell checker.
 <b>Wizard Control</b> Create advanced app wizards with ease.	 <b>Application Skins</b> From Office to MacOS, a theme for all seasons.

## about Vision

**unrivalled data  
control and security**

With Vision, you will enjoy high levels of performance, availability, and security; employ more productive management and development tools; and deliver pervasive insight with powerful business intelligence and data mining.

Vision is considered the glue between the latest technologies; from database, to visualization and customization, to full integration with Office applications, and is capable to embed any web based technology...

### T-SQL

Stored procedures are lines of code that can be called by the application, before executing any add-on. They are placed on the server, and they are pre-compiled for quicker response times. Stored procedures require the knowledge of SQL Server syntax, which is called T-SQL (transaction SQL).

### Security

On top of MS SQL Server's security, Vision has a very granular user rights. Managers can set each user's right to view, edit, add, delete, approve, un-approve, post, un-post, view main layout and customize any form of any module. These rights can also be more granular, where fields can be set to be viewed or not, updated or not, and the admin can also apply predefined masks.

### Transaction Logs

Transaction logs are objects on the SQL Server that record the retrieval, update and deletion of records. There are two reasons to keep transaction logs. The first is for rollback procedures. This process is used for accidental updates or deletions. The administrator can return records back to the original data by using transaction logs. Secondly, the transaction logs can be used for security purposes. If the administrator suspects a breach of security, he can watch the transaction logs for any type of data retrieval and identify the severity of the breach.

### Automated Backup

SQL Server has an automatic backup option. The SQL Server automatically saves a copy of the database and the transaction logs on another hard drive or media like a CD-ROM or a DVD or any external device. SQL Server also has procedures that allow the administrator to quickly restore a database when data is lost or corrupted, or the server has a hard drive crash.

## **Boost Productivity**

Today's business landscape is constantly shifting. Challenges are redefining objectives. Adapting to changes is more essential than ever. The necessity to control your business is ever increasing. Being geared up with tools for best performance becomes a must.

A reliable ERP ecosystem like Vision is one of these tools for a successful organization. Moreover, the increasing flow of information with less resources is a major hassle for your company. An ERP provides outputs keeping you on the lookout for any indication of financial, human or organizing performance while integrating your management processes into one system without having the need to increase your human resources costs.

## **grow Your Business**

Control and flexibility makes Vision a perfect partner. Business changes rapidly nowadays, so should your software. It should support your business strategy, not hinder it. Vision is designed to offer rapid options to adapt to changes and support your growth over time while staying in line with technology.

## **Systematized Operations**

Vision integrates all of your company's information and business processes in a single software database system. It features a stand-alone software solution bringing together advanced functionality with intuitive user experience and complete data integration. Moreover, it provides an efficient workflow engine and user-friendly business and reporting tools. All together, Vision is a compelling combination of modules giving your enterprise systematized operations with real-time control over all activities, and an ideal basis for decisions making in key areas.

## **Increase Group effort**

An open exchange of information between employees is one of the key factors for a company's success. Vision's Client/Server architecture makes collaboration very easy. The architecture ensures that the flow of company information is fast and secure. Vision is constructed so that the database can reside on a central computer, known as a server, and be shared among several users. Users access the server through a client, such as desktop, laptop, pad or even a smart phone. Flexible access options give distributors, customers, and suppliers convenient access to information wherever they are via an Internet connection. That means all partners can become an active part of your business.

## **refine Business Intelligence**

The ability for an organization to take all its capabilities and convert them into knowledge, ultimately, getting the right information to the right people, at the right time, via the right channel is not enough. You have to be able to interpret it accurately. Vision provides historical, current and predictive views of business operations. Business intelligence technologies are represented in our solution through custom components (Grid, Layout, Vertical Grid, Chart, Calendar), powerful Pages (including HTML & websites) and easy to run custom reports. Vision's tools are designed to evaluate, compile, and present all your data with the custom design and evaluation options to consolidate the latest information and make faster, better-informed decisions at all levels.

## **reduce Costs**

An efficient solution only makes sense if it's a perfect way to minimize your costs in the long term. Hence the application is designed to install without elaborate application/data integration by the IT department and without costly hardware. Also, Vision perfectly adapts to your organization with little or no customization. This cost effectiveness, together with the wealth of functionality and features included in the package, provide your company with the best value and price in today's ERP market.

## **Solution that grows with your enterprise**

You can deploy all or part of the Vision ERP ecosystem according to your requirements, one step at a time. All modules are integrated into the system: you simply activate them when you need them, without having to start a new project from the beginning. In the same way, you can implement your ecosystem system in a single location and for a limited number of users first, then progressively connect new users, either locally or remotely. Most legacy ERP and CRM solutions from multinational companies generally require heavy customization to adapt to business in foreign countries. And by the time they become implemented and operational, business conditions may already have changed. This is not the case with Vision, because the system is designed to meet the needs of fast-changing organizations, from the ground up.

**Focus on the Decision making**

Track your key business and performance indicators in real time. Vision enables users to monitor relevant key performance indicators (KPIs) for their activity in real time and focus on irregularity. The user-defined dashboard components provide users with linkable, up-to-the-minute graphical representations of key statistical information. All information is displayed in the form with links that make it possible to follow it up to the information details, thus, allowing management to react quickly to changing business conditions.

**Streamline Management**

In order to streamline the everyday management practice, the software supports all your accounting, purchasing, sales, inventory, customer relationship, and production operations (and so on) at the same time, within one consistent global environment. When you input data into the system, it is distributed throughout the company. As an example, when a delivery note is issued, it has an impact on stock levels, production, accounting, and more. The information is available in real time wherever it is needed with the all capable Microsoft SQL database engine. In turn, no need for data re-entry, no time lost, fewer errors, and reliable and coherent data.

## What they say

subject: Testimonial

I have 20 years of experience in Food production and catering business, where I worked with 3 different soft wares, until I started working with Vision Inc. Since 2007, I rely on vision for every single transaction in my company, in all departments; Accounting, Purchasing, Sales, Production, Payroll, Reports... Not only Am I attracted by the user friendly aspect of Vision, but also with the many customized features, that Vision adapts to my business. I consider Vision and Nicolas AbdelNour as an integral part of my business, a column of our structure, but most of all the brain of our operations.

## UMBRELLA CARE S.A.L

To Whom it may Concern,

I Elias Farah here undersigned, founder of Umbrella Care Sal, have over 10 years experience in the insurance sector.

I have been working with Vision Inc on their dedicated insurance broker software since 2012. I have yet to discover a system which is as flexible and user friendly as Vision. The team are ready to help 24 hours a day, and can adapt and create solutions to my needs as my business grows.

Thank you Nicholas and Marcel for boosting our productivity with your solutions.

This Testimonial was written of my own free will and may serve whatever purpose that may be deemed.

Elias Farah
